

Neuroolutions

Reclaim your life after stroke

IpsiHand is the first FDA-cleared device leveraging brain-computer interface technology to assist chronic stroke patients in rehabilitation. The device utilizes the uninjured, or ipsilateral, side of the brain to improve arm and hand function.

Robotic Handpiece

Headset

Tablet

The Neuroolutions IpsiHand Upper Extremity Rehabilitation System is indicated for use in chronic stroke patients (≥ 6 months post-stroke) age 18 or older undergoing stroke rehabilitation, to facilitate muscle re-education and for maintaining or increasing range of motion in the upper extremity.
